When only the best will do, you can depend on Nance & Underwood Rigging & Sails...

Please use the diagram and table on this form as a guide to measuring your own lifelines. Be sure to measure both sides of your boat as measurements often do not match from side to side. Please indicate whether you prefer to use PVC Coated 7 x 7 wire or Uncoated Type 316 SS 1x19 wire for your lifelines.

For safety as well as cosmetic reasons life lines need to be replaced at regular intervals depending upon use, UV exposure and other environmental factors. We use fittings from two of the leading manufacturers, CSJohnson and Hayn Marine.

Although there are many variances when ordering, please keep in mind these more commonly used terminals like Toggle Jaws, Open or Closed Body Turnbuckles. Single and Interlocking Gate Eyes. Tubular and Cast Pelican Hooks.

When ordering and installing your new lifelines from Nance & Underwood, please consider Lifeline Netting as an added safety feature.

Lifeline netting helps keep small children and family pets safe. Please contact us with any questions.
